4 Limitations

- Only single core, single processor 32 bit and AMD64 architecture systems are tested and supported.
- 2 Meter Limitation when printing PDF files using the GDI driver 3.2.4. This is a problem of the driver working with Adobe reader. The workaround is to set "Print as Image" under advanced settings. This increases file size and takes longer to print, this currently is the only workaround available.
- GDI print driver supports data output up to 15m; however, in the case of an application software which has the concept of paper size (ex. Microsoft Excel), the maximum length is 3,276mm. The actual output length depends on the memory size mounted on the printer, paper size, and paper type. For full detail, please refer to the user guide for the printer.
